Professional Series Models:

- DN 3001 1 Station LCD Irrigation Controller
- DN 3005 5 Station LCD Irrigation Controller

Dayni single & five station controllers

Dayni automates most anti-siphon valves

Controller can be wall mounted

## AUTOMATIC POOL FILLER

### Solid State Automatic Water Height Pool Control System - Battery Operated

**The Dayni Water Height Controller** is designed to protect your pool and maintain water level. It easily adapts to the anti-siphon valve of the pool or there is a hose bib adapter available for those that fill with a hose. Simply remove the anti-siphon stem, replace with a Dayni Valve Adapter and then snap on the Dayni DN2011 Controller. At the water line, epoxy the sensor to pool tile using Dayni DN2015. Then run the pool cable DN3250C from Controller to sensor using expansion cracks or under decking through overflow tube. Simple snap one end of the cable to Controller and the other to sensor. In minutes you have automated your pool.

- Battery-operated or AC
- Fully automated
- Installs in Minutes
- No Moving Parts
- Saves Time, Water & Money
- Solid State Quartz Reliability
- No Electricians or Permits
